They need to add TCEQ and Sector Houston USCG to the list of responders. There were 4 fatalities and no injuries.

On Saturday, November 15, 2014 at approximately 3:30am, the DuPont Laporte Facility experienced an apparent valve failure resulting in the release of Methyl Mercaptan, a chemical used in two insecticides that are manufactured at the facility. Emergency responders were notified, including the Channel Industries Mutual Aid, the county and EPA. Four fatalities and one injury were reported as a result of the release. Air monitoring was conducted and as a precaution, a shelter-in-place order was issued for plant personnel. Initial reports indicate the chemical was not detected beyond the plant perimeter. EPA has been informed the U.S. Chemical Safety Board is sending a team to the site.
